- *Inheritance expectations and youths' educational choices in Italy*

Italy exhibits an increasingly old population and substantial wealth, whose distribution is skewed towards the elderly. Coupled with dismal economic growth, this has translated into a growing flow of bequests over household disposable income. At the same time, both Italian higher education rate and the associated skill-premium are among the lowest of advanced economies. Could inheritance expectations play a role in youths' educational choices, thereby affecting the degree of intergenerational persistence in wealth and income? I first investigate this empirically, relying on the Survey on Household Income and Wealth (SHIW) by the Bank of Italy. I document how expecting an inheritance, even after controlling for many relevant variables at household and individual level, is associated with higher likelihood of attending university. Individuals aged 18-25 expecting an inheritance are some 20 percentage points (approximately 50%) more likely to pursue higher education. Expected housing wealth appears to be the driver of this conditional association. These findings survive a series of robustness checks. I then propose a toy-model to illustrate one of the possible mechanisms through which expected inheritance might increase the likelihood of attending university, namely dynastic persistence in the preference for altruism. The last, tentative, part presents a quantitative

model aimed at studying some counterfactual scenarios and establishing the relevance of the different channels at play.

- *Unconventional monetary policy communication*, with Andrej Mijakovic
- Central bank communication has numerous facets. This paper studies the role of official speeches by central bank representatives for financial market outcomes. First, we uncover the main themes discussed by central bankers combining unsupervised machine learning techniques with data on the entire universe of speeches given by Executive Board Members of the European Central Bank since 1999. Second, we find that central bank speeches convey important information about the central bank's perceived reaction function. Asset prices respond strongly to the content revealed in speeches, suggesting a novel channel through which central banks can influence market expectations.
